

Hello!

The brag I have is being recognized as one of the top 150 “premiere technical contributors” at Red Hat in 2023. It looks good, but I’m more satisfied by what Dawn Aly and other coworkers felt. Dawn, and my former manager at Red Hat Tom are available for recommendations on request.

I’ve spent 19 years working on the web. My core skill set has always been user interface, usability, and accessibility. I’ve led more enterprise scale web projects than I could list here, worked with user research firms, form redesigns that vastly improved completion rates, and love working on the web.

I’m making a pivot in my career, I’ve traditionally worked across any frontend stack tied to an enterprise CMS. My next job I want to work in React/Vue/Solid as the primary tech stack.

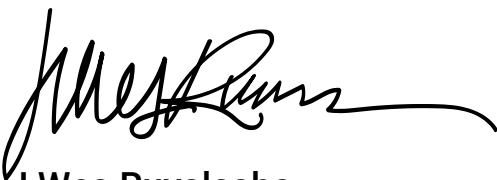

My knowledge of markup, styling, behavior, usability/accessibility, UX/UI, workflow and process are hard to beat.

That’s not what I feel makes me successful. Tech stacks aren’t the hard part, and I’ve worked in a lot of them. I’ve found my ability to communicate, streamline work, build consensus, make safe places to discuss ideas/disagreements, make sure goals are measurable and set appropriately. It makes for good work and raises all boats.

Those skills were most helpful in getting double digit improvement in conversion rates and customer satisfaction, respectively, for Highlights for Children e-commerce and Red Hat Software’s technical documentation.

Good communication, whether visual, written, or spoken, are deeply important to me. I find there are more problems solved with those than any specific technology.

Hope to talk to you soon,

J Wes Ruvalcaba

(I go by my middle name to confuse everyone)

LinkedIn Recommendation:

Dawn Aly

Director, User Experience Engineering
Portfolio Strategy at Red Hat

“Wes has a rare combination of deep technical expertise, systems thinking, and the ability to navigate complex enterprise environments at scale. He consistently tackled difficult architectural and engineering problems, often working across multiple teams and domains to drive solutions forward.

One of the things I appreciated most as a product leader was that Wes would always give honest, thoughtful feedback. He never avoided hard conversations or difficult tradeoffs, but his approach was always grounded in helping the team make better decisions. He brought strong opinions backed by experience, context, and a genuine desire to improve outcomes, not just debate for the sake of debate.
